Fan-less conduction cooled 300W scalable power

The VCCS300 Conduction Cooled Power Series delivers a silent 300 Watts of continuous output power in a rugged and miniature 4" x 2" x 1.61" package. It is the ultimate power solution for Class I & II applications where rugged reliability, high efficiency, silent operation, and medical BF-rating are important factors. Power solutions of 300W, 600W, 900W and beyond can be achieved by using the onboard droop current share function, which allows end users to scale up their power requirements or add redundancy depending on their system needs. The VCCS300 series offers standard output voltages of 12, 15, 24, 28, 36, 48 and 56VDC. Non-standard and value-add solutions are also available which allows customers to choose any output voltage from 12V to 58V, saving system designers valuable time and cost. The power series is BF-rated, feature Class I & II isolation and are approved to medical equipment standards including IEC/UL60601-1 Edition 3.2 and IEC/UL60601-1-2 Edition 4 (EMC). The VCCS300 series achieves very high efficiencies up to 95%, best-in-class EMC performance, low no-load power consumption and come with a standard 5-year warranty.

5 YEAR WARRANTY

MAIN FEATURES & BENEFITS

- Powerful 300 Watt (Vin >120V_{RMS})
- Small 4" x 2" x 1.61", exceeding 23W/in^3
- Fan-less conduction cooled & silent operation
- Scalable power architecture
- Parallel units with droop current sharing
- Standard outputs 12, 15, 24, 28, 36, 48, 56V_{DC}
- Fully safety approved & value-add solutions from 12 to 58V_{DC} on request.
- Approved to latest safety standards: IEC/UL60601-3.2 Ed & IEC/UL60601-1-2 4th Ed (EMC)
- High efficiency – up to 95%
- High reliability
- Class I or II installations
- Operating altitude up to 5000m
- Low leakage & touch current
- Low no-load power consumption
- BF rated output
- Best-in-class EMC performance
- 24-hour samples from distribution
- Supplier & technology consolidation
- SEMI F47 compliant
- MIL-STD 810G, MIL-STD 461F & MIL-STD 704F
- Expert technical support
- 5 year warranty

Notes
1. 30°C base & ambient, 100% load, SR332 Issue 2 Method I, Case 3, Ground, Fixed, Controlled
   To ensure reliability, component temperatures must be maintained below recommended levels in the end application.
   The "System cooling" section of the user manual should be reviewed in detail and temperatures verified in the end application.
2. Up to 3% in burst mode with no external capacitance.

Notes:
1. Criterion A = No degradation of performance or loss of function.
   Criterion B = Temporary degradation of performance or loss of function is allowed, provided the function is self-recoverable.
   Criterion C = Temporary loss of function is allowed but requires operator intervention to recover.
2. Tested at nominal range (100V to 240V). Line deratings applied where appropriate.
3. Criterion A is achieved for all input voltages when Pout <= 280W
4. Criterion A is achieved for full power when Vin >=160V or at all input voltages when Pout <= 200W

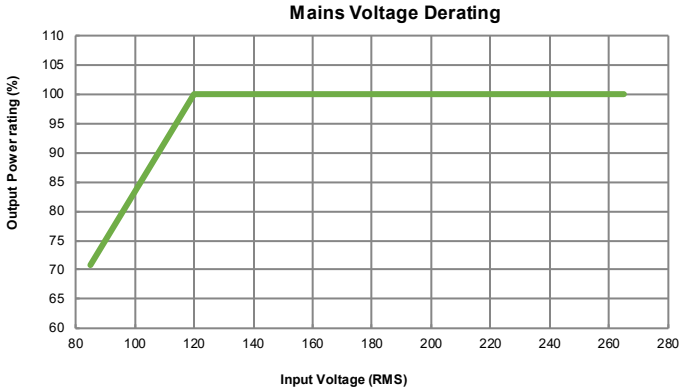
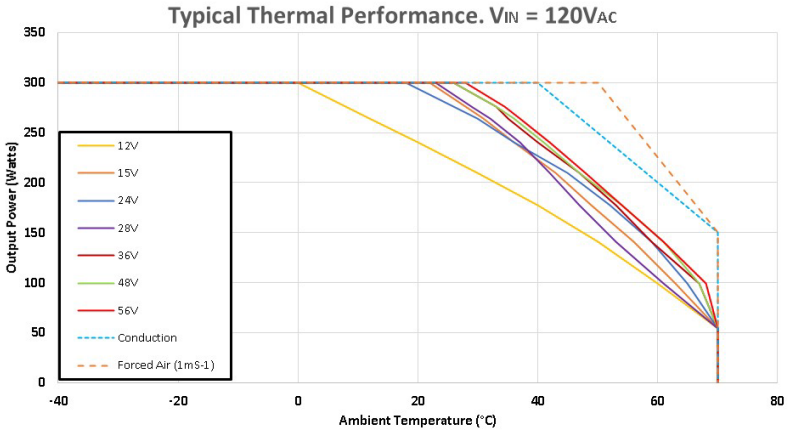
POWER RATINGS
Mains Voltage Derating [8]

Mains Voltage Derating Table		
Mains Voltage (V_{RMS})	**Output Power**	**(%)**
120	300	100%
110	275	91.7%
100	250	83.3%
90	225	75.0%
85	212.5	70.8%
The output power must be de-rated by 2.5% for every 3 volts below 120V_{RMS}, down to a minimum of 85V_{RMS}.		



Typical Thermal Performance [7]

Typical Convection Cooled Performance. VIN = 120VAC					
Ambient (°C)	**0**	**20**	**30**	**50**	**70**
12V	300	240	210	141	54
15V	300	300	268	172	54
24V	300	294	264	186	54
28V	300	300	272	159	54
36V	300	300	286	193	54
48V	300	300	286	196	54
56V	300	300	292	199	54



Notes:

1. Ambient air temperature is the air temperature immediately surrounding the PSU. If the PSU is mounted within an enclosure, the internal enclosure ambient temperature should be used.
2. Typical convection cooled performance is measured under controlled conditions in a sealed chamber of approximately 0.5mx0.3mx0.5m with the unit positioned in the centre of the volume.
3. The profiles shown ensure all components remain within their IPC9592B deratings.
4. Operation of components above the recommended temperatures will result in reduced lifetime of the unit and invalidate the warranty.
5. The conduction cooled rating for all models applies under the following conditions: Baseplate temperature [2] ≤ $T_{AMBIENT}$ + 15°C
6. The forced air rating for all models applies for airflow ≥1mS^{-1} (200LFM). See *Mechanical Dimensions and Mounting* section for Airflow direction.
7. See user manual for further details of ratings and safety certifications.

Mains Voltage deratings are cumulative with thermal deratings.
